

VOCAL-MEDICAL

Overcoming barriers in healthcare communication

Leonardo-Office Saxony-Anhalt (GER)

The LEONARDO-Office is a regional placement consortia of 7 universities. Founded in 1991 it organizes the collaboration between universities and businesses within the framework of EU projects. We offer ERASMUS+ traineeships for students, graduates and apprentices including traineeship assistance (preparation, EU-grants, recognition, Europass). Furthermore, we provide placements and a mentoring program for incomings.

Emergency case

VOCAL-MEDICAL (EU-project)

Good communication is essential in the healthcare sector – it can literally make the difference between life and death. Increased mobility and demographic change mean that more and more healthcare situations involve people who do not share a common language or cultural background.

This Leonardo da Vinci transfer of innovation project (involving 14 partners from 10 countries) aims at improving this interaction by providing:

- web based intercultural and language learning materials
- a translation tool
- covering 9 European languages
- Arabic coming soon
